

Spatial Reasoning

Hidden Shape

What do I do?

Find the image that contains the hidden shape. The hidden shape must be the same size and orientation as the original shape.

Top Tips!

- Don't be fooled - the shape that you are looking for will appear in most options. The one you are looking for **must be the same size and orientation** (way up).
- Focus on one pattern at a time and look for a distinguishing feature of your shape first. Does it have a curved edge or point?
- If you're starting to lose your focus, move onto another question and come back. Be aware that this strategy might not be an option in your exam.

What skills do I need to improve?

Doing lots of practice questions will help with becoming familiar with question types but what else can you do to improve in this area?

- Training your eyes to scan quickly for recognisable shapes can be tough. Any books that offer a 'search and find' purpose, is great revision for these questions. Books such as 'Where's Wally?' by Martin Handford and 'Things to spot' by Usbourne.
- Creating your own questions is always a great revision tool of understanding a question and it'll give you a chance to showcase your new skills. Can you write your own questions for a family member or friend?
